Learn how to use the `Option StatusUser` config.txt directive to direct EZproxy to display the username associated with a login session on the Server Status page.

**Option StatusUser** directs EZproxy to display the username associated with a login session on the Server Status page, making it easier to determine if the same username is being used by many users to gain access to your server.

**Syntax**

| Option StatusUser |

**Examples**

Display the username associated with a login session on the Server Status page:

| Option StatusUser |
