Learn how to use the Option StatusUser config.txt directive to direct EZproxy to display the username associated with a login session on the Server Status page. 

**Option StatusUser** directs EZproxy to display the username associated with a login session on the Server Status page, making it easier to determine if the same username is being used by many users to gain access to your server.

**Syntax**

```plaintext
Option StatusUser
```

**Examples**

Display the username associated with a login session on the Server Status page:

```plaintext
Option StatusUser
```
