Learn how to use the Title config.txt directive to start a new database stanza and specify a title to associate with the stanza in EZproxy.

*Title* starts a new database stanza and specifies a title to associate with the stanza. *Title* is used only once per database stanza and interacts with database stanzas, groups, interface directives and IP ranges. The scope of *Title* is the current database stanza. It is a position dependent config.txt directive and can be viewed on the EZproxy Menu Page.

**Qualifiers**

<table>
<thead>
<tr>
<th>QUALIFIER</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>Specifies the title to associate with the database stanza. The title appears in various EZproxy administration pages and conditionally appears in the EZproxy Menu page unless the <code>-Hide</code> option is included.</td>
</tr>
</tbody>
</table>

**Options**

<table>
<thead>
<tr>
<th>OPTION</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>-Hide</td>
<td>-Hide specifies that this stanza should be suppressed in the EZproxy Menu Page.</td>
</tr>
</tbody>
</table>

**Syntax**

```
Title [-Hide] text
```

**Examples**

Two database stanzas, the second of which will be hidden from the EZproxy Menu Page but which can still be accessed using a Starting Point URL.

```
Title Some Database
URL http://www.somedb.com
D somedb.com

Title -Hide Other Database hidden from EZproxy Menu
URL http://www.OTHERdb.com
D otherdb.com
```
