Learn how to use the TokenKey config.txt directive to specify a token key for authentication to Books24x7.com in EZproxy.

**TokenKey** specifies the token key to use when authenticating to Books24x7.com. The token key is a value is an arbitrary string chosen by your institution to randomize the tokens provided to Books24x7.com. This value is used in combination with the **Books24x7Site** and **TokenSignatureKey** to generate encrypted authentication URLs needed to authenticate users into this resource.

**TokenKey** is used only once per database stanza and interacts with database stanzas. The scope of **TokenKey** is the current database stanza. It is a position-dependent config.txt directive.
