Learn how to use the `TokenSignatureKey` config.txt directive to specify the token signature key to authenticate to Books24x7.com in EZproxy.

`TokenSignatureKey` specifies the token signature key to use when authenticating to Books24x7.com. The token signature key is a value assigned by Books24x7.com to authenticate an institutional subscription, similar in nature to a password credential. This value is used in combination with the `Books24x7Site` and `TokenKey` to generate encrypted authentication URLs needed to authenticate users into this resource.

`TokenSignatureKey` can be used only once per database stanza and interacts with database stanzas. The scope of `TokenSignatureKey` is the current database stanza. It is a position dependent config.txt directive.

**Qualifier**

<table>
<thead>
<tr>
<th>QUALIFIER</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>signkey</code></td>
<td>Value assigned by Books24x7.com to authenticate an institutional subscription.</td>
</tr>
</tbody>
</table>
