Learn how to use the XDebug config.txt directive to enable the recording of diagnostics to messages.txt in EZproxy. XDebug enables the recording of diagnostics to messages.txt. Use XDebug only when requested by OCLC Customer Support.

**XDebug** is a non-repeatable position-independent config.txt directive.

**Qualifiers**

<table>
<thead>
<tr>
<th>QUALIFIER</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>level</td>
<td>A numeric value that determines that amount of debugging detail to log. Larger values enable more detail. OCLC Customer Support will specify the values to use.</td>
</tr>
</tbody>
</table>

**Syntax**

```
XDebug level
```

**Examples**

Enable the logging of minimal diagnostics.

```
XDebug 1
```

Enable the logging of extensive diagnostics.

```
XDebug 1000
```
