Learn how to use the XDebug config.txt directive to enable the recording of diagnostics to messages.txt in EZproxy. **XDebug** enables the recording of diagnostics to messages.txt. Use **XDebug** only when requested by OCLC Customer Support.

**XDebug** is a non-repeatable position-independent config.txt directive.

### Qualifiers

<table>
<thead>
<tr>
<th>QUALIFIER</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>level</td>
<td>A numeric value that determines that amount of debugging detail to log. Larger values enable more detail. OCLC Customer Support will specify the values to use.</td>
</tr>
</tbody>
</table>

### Syntax

```bash
XDebug level
```

### Examples

Enable the logging of minimal diagnostics.

```bash
XDebug 1
```

Enable the logging of extensive diagnostics.

```bash
XDebug 1000
```
