Guidelines for adding cooperative collections to the knowledge base

Last updated: Thu, 11 Jul 2019 14:31:59 GMT

Review these guidelines and best practices before adding a cooperative collection to the global knowledge base.

About adding global collections

You can submit any "Locally Created" collection to the WorldCat knowledge base cooperative. Your collection must be "Customizable" if you want institutions to be able to edit title selections and title-level data.

Every submitted collection will go through OCLC’s approval process before it becomes available to the community.

Make sure your collection meets the following guidelines before submitting your collection to OCLC.

Include OCLC numbers

The titles in your collection must have a valid OCLC number whenever possible. In some cases, titles in a collection may not have been cataloged in WorldCat and therefore will not have an equivalent OCLC number. Collections missing a small percentage of OCLC numbers may still be approved.

As a best practice, aim for at least 70% OCLC number coverage for your collection and then add the additional numbers as the titles are cataloged in WorldCat.

Include Standard Numbers (ISSN / ISBN)

Highly recommended. The titles in your collection must have a valid Standard Number (ISSN/ISBN) whenever possible. Standard Numbers will help with the discoverability of full-text knowledge base links for patron search results. In some cases, titles in a collection may not have a Standard Number. Collections missing Standard Numbers may still be approved.

As a best practice, aim for at least 70% Standard Number coverage for your collection and add the additional numbers to the knowledge base titles if they become available.

Use valid URLs for titles

The titles in your collection must have valid URLs. We will spot check the URLs associated with the titles in your collection to make sure they resolve to the correct place.

It’s important to make sure the URLs to the full-text are not specific to your institution in any way. If there is a value in the URL that is specific to your institution, then your collection will be denied and it will not be added to the WorldCat

knowledge base data.

Contact OCLC Support if the URLs for your custom collection include library-specific values or you need our help creating a link scheme for the collection so that it can be used by all libraries.

Serial collections: If you want to submit a serial collection, contact OCLC first so we can help you build a link scheme before you submit the collection. Having a link scheme allows users to link to the article level of WorldCat Discovery.

Submit a subscription package or a full set of titles

The cooperative functionality of the WorldCat knowledge base should be used to represent collections that your library has curated or created to represent full collections from a provider that the WorldCat knowledge base might be missing.

Do not submit a single title or a few titles as a collection through the cooperative. If you are working on building a collection with other libraries and that is the reason for the incomplete title list, note this in the comment field of the confirmation window upon submission so your project will go through.

Please keep your gap title collections as private, local collections and alert OCLC Support so that we can address the issue with the provider.

Database-only collections: It’s not currently possible to submit database only collections to the cooperative. This functionality will be added in the future.

If all titles are open access, select the attribute

When you create a collection, you have the option in the Properties accordion to select attributes that describe all of the titles in your collection. If all of the titles are open access, select the open access attribute. If needed, you can edit your attribute selections after you’ve created the collection.

Proxy settings are set at the collection level and if enabled, inherit libraries' institution settings. Select the collection-level setting that fits your and other libraries' needs. For example, make sure it is disabled if the titles in the collection are open access and can be accessed by off-campus users without the need for authentication.
