Breadcrumb always visible

Last updated: Fri, 15 Nov 2019 19:26:57 GMT

Link: See a live example.

View: View source code in CONTENTdm Cookbook Demo Site.

The default behavior of the CONTENTdm website is to show a structural breadcrumb on the item pages only in tablet and desktop screen sizes. When the window is small (phone/mobile view) the breadcrumb is disabled.

If you prefer showing the breadcrumb at all screen sizes, you can alter the behavior using a single custom CSS rule as shown below. Once you've added this CSS rule to your site, the breadcrumb will appear on mobile phone screens as well as tablets and desktops.
