Discover how to view records linked to a bibliographic record from the Text view editor in WorldShare Record Manager. When working on a Text View bibliographic record, you can view linked records which are records that are clustered together because they represent different versions of the same creative work.

1. From the Text View editor, click Other Records Linked to Work to open the accordion. The table in this accordion lists the title, date, language, publication, and format for each version of the work.

2. (Optional). Click the link on the Other Records Linked to Work accordion to view the corresponding parent work page. The work page provides a summary of the work, including information about the Type, Genre, and Summary of the item. The page also lists all linked child records.
