Find EZproxy Hosted External IP Address

Last updated: Thu, 11 Feb 2021 16:18:52 GMT

External IP address for Hosted members

Applies to

• All EZproxy Versions

Answer

• If you know your server name such as oclc.idm.oclc.org, you can do a nslookup command from a command prompt and get the IP address. At a command prompt, you type in:

```
nsslookup [server code].idm.oclc.org
```

in this case, it would be:

```
nsslookup oclc.idm.oclc.org
```

• You will get the IP address in the response.

• Or for Hosted EZproxy contact OCLC Support.

• Or for a Standalone EZproxy. You will have to contact your IT as they will know what IP is assigned to your server.
