Web Service Keys Admin role

Find information about the Web Service Keys Admin authorization role available in the Admin module. The Web Service Keys Admin role (*WSKey Admin*) allows users to access WSKey Management at the [OCLC Developer Network](https://help.oclc.org/WorldShare/WorldShare_Admin/Roles/Web_Service_Keys_WSKeys_role). This role can be used by institutions who do not have another administrative role to assign (e.g., EZproxy-only institutions).
