Why are my OpenURL Resolver links returning a Bad Request - Invalid URL error?

Last updated: Thu, 06 Jan 2022 16:10:11 GMT

Symptom

- The error "Bad Request - Invalid URL" comes up when following an OpenURL Resolver link.

Applies to

- WorldCat Discovery

Resolution

A "Bad Request - Invalid URL" error means that the OpenURL Resolver link is formed incorrectly. A very common error is to leave off the question mark at the end of the URL prefix (ie. http://<resolver domain name>.com/openurl? vs. http://<resolver domain name>.com/openurl ). Try adding a question mark to the end of your URL and if problems continue, contact OCLC Support.

Additional information

There are steps for managing your OpenURL resolvers in Service Configuration.
