Why am I receiving minimal or incomplete MARC records from a WorldCat Cataloging Partners collection?

Last updated: Thu, 27 Jan 2022 14:26:30 GMT

Symptom

• MARC records delivered by Cataloging Partners collections lack common fields and appear minimal or incomplete.

Applies to

• WorldCat Cataloging Partners
• WorldShare Collection Manager

Resolution

Check the **MARC Records > Record Delivery** tab inside the Cataloging Partners collection to see if the **Limit Output By > Encoding Level** field is set to **Use all encoding levels**. If it is, switch that setting to use one of the [fuller encoding levels via the radio button below that](https://help.oclc.org/Metadata_Services/WorldShare_Collection_Manager/Troubleshooting/Why_am_I_receiving_...).
