Locate items in the library with StackMap

Last updated: Fri, 18 Oct 2019 11:46:08 GMT

Learn how to locate items in your library using StackMap with WorldCat Discovery. StackMap is an indoor mapping solution and way-finding tool designed to help users physically locate items and explore spaces. WorldShare Management Services institutions can integrate StackMap directly within the WorldCat Discovery interface.

Please see StackMap for configuration information.

StackMap link display

Once enabled, StackMap links will appear on both search results and detailed records. Clicking on the StackMap link will open a library map in a modular window. The map indicates the location of the item, including any directions configured in StackMap. Options include:

- Zoom In
- Zoom Out
- Entire Map
- Print
**StackMap links on search results**

StackMap links to a library map appear on search results along with the availability statement. StackMap can be configured to display the StackMap button only for items that are physically available or for all items. To configure this setting, see [StackMap configuration](https://help.oclc.org/Discovery_and_Reference/WorldCat_Discovery/Search_results/Locate_items_in_the_library,...).

Note: You must configure item availability on search results to display StackMap links. See [Item Availability on Search Results](https://help.oclc.org/Discovery_and_Reference/WorldCat_Discovery/Search_results/Locate_items_in_the_library,...) for more information.
StackMap links in detailed records

StackMap links display next to the Status on detailed records. StackMap links will appear regardless of the item’s availability.
