Can you limit searches in Discovery by shelving location?

Last updated: Thu, 24 Mar 2022 16:10:48 GMT

Applies to

- WorldCat Discovery

Answer

There is currently no way to use search facets to see shelving location by branch results in Discovery.

The request can be partially met with existing search functionality using b8, which is the index that allows searching for shelving locations. It can be combined with bib indexes and will return results that may satisfy some use cases (note the shelving location depends on the Holding Location so this may lack desired precision in many circumstances).

An example of this might be:

```
ti:xxxx AND b8:zzzz (ti:harry potter AND b8:main)
```
