Does all metadata have to come from source data, or can I specify more collection-level data in mappings?

Last updated: Wed, 28 Dec 2022 19:49:41 GMT

The Gateway has a feature to allow you to control the “material type icon” from data in your source records. It also has a prefix/suffix feature to allow you to append constant data to existing source metadata fields, and a constant data feature to allow you to supply collection-level data to be applied to each metadata record uploaded for a collection.
