Can I tell the Gateway how to display a thumbnail for my digital content?

Last updated: Mon, 25 Feb 2019 20:36:32 GMT

- If you are using CONTENTdm, the WorldCat.org interface is programmed to build a thumbnail URL from the Reference URL in your metadata.

- If you are using a different type of repository, for example DSpace or bepress, you can configure your server to include a thumbnail URL in the metadata and use the Gateway's thumbnail mapping feature. This feature is described [Add a thumbnail image](https://help.oclc.org/Metadata_Services/Digital_Collection_Gateway/Frequently_asked_questions/Can_I_tell_the_gateway_to_discriminate_between_thumbnail_and_full_size_images).
