Is there a way to set up automated harvesting from repositories?

Last updated: Tue, 19 Mar 2019 12:54:50 GMT

Applies to

• Digital Collection Gateway

Answer

Automating the harvesting of your metadata can be set up using the Digital Collection Gateway. You can create profiles for your digital content metadata to be regularly harvested, uploaded and converted to WorldCat format. After uploading, WorldCat assigns and returns an OCLC number, which you can embed in the metadata to support future synchronizations.
