We are having trouble obtaining articles in Clinical Key Nursing at article level but other ClinicalKey articles are fine

Last updated: Thu, 11 Jul 2019 08:08:26 GMT

Symptom

- In Discovery, we cannot get the Full Text of Clinical Key Nursing articles. If we search via the journal title and drill down to the year and issue, then we can get access, so the subscription is fine

Applies to

- WorldShare Collection Manager
- Worldcat Discovery

Resolution

These particular journals need a different Link Scheme. Currently journals from the ClinicalKey Nursing collection use a linking scheme called "ckey.au", which is valid for most ClinicalKey journals. However this linking scheme needs to be **nursing** just for these ClinicalKey Nursing journals - so adjusting this to "nursing" will hopefully fix these links.

It will be necessary to update the Override Link Scheme for the journals in this collection by following these instructions:

1. Access Metadata > **Collection Manager**.
2. Navigate to the title-level settings by searching for the collection and clicking on it to open the collection.
3. In the collection, expand the **Titles** accordion.
4. Click on a title to open the title metadata.
5. In the **Linking Overrides** section, edit the **Override Link Scheme** field so that the title link scheme will override the existing collection-level link scheme.
6. Save and exit.

This will direct the links to the correct platform.

Additional information

- Find out more about Link Scheme values and overrides
- See the [link scheme values spreadsheet](https://help.oclc.org/Metadata_Services/WorldShare_Collection_Manager/Troubleshooting/We_are_having_trouble_obtaining_articles_in_clinical_key_nursing) for the Link Schemes supported by the WorldCat knowledge base.
