How do I update a Network path that ILLiad will use?

Last updated: Mon, 08 Jul 2019 20:58:14 GMT

Applies to

• ILLiad

Answer

If there is a key in the ILLiad Customization Manager that needs to be updated, you should first go to the location from your computer. Copy the Path and put it in the Customization Manager. Then restart the ILLiad Client. You should be able to access the same path your computer is set up to access.
