ILLiad is getting a slow response and is sluggish especially when sending electronic articles

Last updated: Mon, 10 Feb 2020 22:11:22 GMT

Symptom

- Your ILLiad client is slow to respond and it is most apparent when sending electronic articles

Applies to

- ILLiad

Resolution

Here are some suggestions that might help you resolve your sluggishness issue:

1. You might check with your network people and see if there are any bandwidth restrictions on port 1433 or 1344 whichever you are using for your ILLiad connection to the SQL Server. A slowdown will cause a problem in ILLiad processing overall.
2. Check port 7968 with the same bandwidth restrictions. Odyssey uses this port to send and receive files.
3. For the Odyssey files you are sending that have problems, are they large files over 40 MB PDF, or 20 MB tif files? Or are they many pages you are submitting such as over ten pages. All these are issues with sending with Odyssey or Article Exchange.
4. Check your Web Server and SQL Server and Local computer space. Are you running out of space? If you are, you need to clear up space in each of these places. When you are running out of space on the SQL Server or especially the Web Server, that will cause the issues you are having. I doubt all the computers would be running out of space locally.
5. Are you running a Server Addon? Make sure you follow the instructions from the How do I Install a Server Addon help document. The Server Addons should be at the latest version. Also, make sure your ILLiad System Manager service which controls the Addons is not having issues. The SystemManagerAddonInterval key should be set to 5. If the value is less than that, update it to 5 and restart the ILLiad System Manager service. We have found that any lower than that, the ILLiad System Manager service can be bogged down and this would also slow the full server down.
6. What version of ILLiad are you using? If you are not at the latest version of ILLiad, you might consider updating your Web Server ILLiad to the newest version. After that, update your local computers.
