I am using third party authentication and I accidentally assigned the incorrect User ID at Source to an account. How do I remove this?

Applies to
- WorldShare Admin

Answer
User ID at Source is loaded in patron accounts using the idAtSource field in a patron load. This field cannot be removed from accounts by WorldShare users. If you accidentally loaded an incorrect User ID at Source into an account, you must delete that account and reload it into the system via a new patron load.

Additional information
See Patron Data Files for more information.
