How do I set up my ILLiad Services for Debug Logging?

Symptom

• You want to set up your ILLiad Service for Debug logging for better troubleshooting

Applies to

• ILLiad

Resolution

Here are the different services, what you need to change and the name of the file you need to change.

1. Connection Manager - The rootlogger should be "log4d.rootLogger=DEBUG,ROOT" - ConnectionManager.log4d.props.
2. Odyssey Manager - The rootlogger should be "log4d.rootLogger=DEBUG,ROOT" - OdysseyManager.log4d.props.
3. ISO Manager - There is no change, it automatically logs everything.
4. Rapid Manager - The level value should be <level value="DEBUG" /> - RapidManager.log.config.
5. System Manager - The level value should be <level value="DEBUG" /> - ILLiadSystemManager.log.config.
