How do I make a shelving location non-circulating?

Last updated: Tue, 22 Oct 2019 14:44:25 GMT

Applies to

- WorldShare Circulation

Answer

In order to make a shelving location non-circulating you will first want to make sure that you have a non-circulating loan policy created. These policies are found in Service Configuration > WMS Circulation > Loans > Loan Policy. You will then want to create a line in the Loan Policy Map linking the shelving location in question to the new non-circulating loan policy, this can also be done in the Service Configuration > WMS Circulation > Loans > Loan Policy Map.
