Why are interloan requests being autodeflected when we have holdings?

Symptom

We've had libraries contact us asking why they got auto-deflected non-supply messages on articles that we are listed as holding. The message they received was "Auto deflection - local holdings". We discovered that quite a lot of our LHR items have Will Not Reproduce in MARC field 008/21. Can you please confirm what nodes 008/20 and 008/21 on the LHR should be set to for serials?

Applies to

- WorldShare Interlibrary Loan
- WorldShare Record Manager

Resolution

WorldShare Interlibrary Loan can use the codes in 008 bytes 20 and 21 of your LHRs to automatically deflect ILL requests.

They can override or defer to your Policies Directory profiles as outlined below.

008/20 - Lending policy
- Settings that will override Policies Directory Profiles
  - a - Will lend
  - b - Will not lend
  - c - Will lend hard copy only
- Settings that will defer to Policies Directory Profiles
  - l - limited lending policy
  - u - unknown

008/21 - Reproduction policy
- Settings that will override Policies Directory Profiles
  - a - Will reproduce
  - b - Will not reproduce
- Settings that will defer to Policies Directory Profiles
  - u - unknown
If your library would prefer to manage this through Policies in the Policy Directory, not on individual LHRs, set both fields to u.
