Testing set uniqueness error when adding new repository

Last updated: Thu, 05 Dec 2019 14:00:14 GMT

Symptom

- You get the error "Testing Set Uniqueness" when adding a new repository to the Digital Collection Gateway

Applies to

- Digital Collection Gateway

Resolution

If this test fails, it means that the repository returned a proper OAI ListSets response containing set information, but one or more of the setSpec identifiers are duplicated. The Gateway cannot work properly with duplicate setSpec identifiers because those are used to differentiate the collections in the repository. The user will not be allowed to add the repository with duplicate setSpec identifiers.

Additional information

There is more information on the ListSets verb. There is more information on errors that can come up when adding a new repositories to the Digital Collection Gateway.
