Why does my proxied URL have dashes?

Last updated: Fri, 13 Dec 2019 15:44:24 GMT

Applies to

- EZproxy Proxy-By-Hostname

Answer

The answer has to do with how EZproxy handles https URLs.

The "dashes" are used when processing an https URL so the entire hostname (https://www.somedb.com/) will be translated to one host www-somedb-com. This allows the wildcard certificate on your server (*.ezproxy.institution.edu) to be used to maintain HTTPS connectivity without browser warnings.

Example URL: https://ezproxy.institution.edu/login?url=https://www.somedb.com

EZproxy rewritten URL: https://www-somedb-com.ezproxy.institution.edu/
