When uploading catalogues within OpenOPAC I get a lock obtain timed out message and it will not continue the upload

Last updated: Thu, 27 Feb 2020 02:51:43 GMT

Symptom

- When uploading all catalogues in **OpenOPAC > Configuration > Upload** TAB occasionally an error occurs which stops the Upload with a Time lock message
- Message is usually: **Lock obtain timed out**: NativeFSLock@C:\inetpub\wwwroot\OCLC\SearchData\write.lock. The path to the Search Data may differ depending on your version of OpenOPAC

Applies to

- Amlib OpenOPAC

Resolution

This typically happens after a Windows crash or something else that caused the machine to suddenly stop working (power outages etc.).

Suggested remedies include:

1. **Delete the search index** and upload everything again. The search index is in the folder C:\inetpub\wwwroot\OCLC\SearchData on the OpenOPAC Server. Delete all files in that folder and restart the Upload.
2. **Delete the search folder** and upload everything again. Delete the whole folder at C:\inetpub\wwwroot\OCLC\SearchData folder and Upload catalogues from fresh.
3. Try **rebooting the Server** and ensure that the C:\inetpub\wwwroot\OCLC\SearchData is empty before trying the Upload of all catalogues again.
