Getting 008 validation errors in Digital Collection Gateway

Last updated: Mon, 09 Mar 2020 13:04:33 GMT

Symptom

- You see a series of validation errors referencing the 008 tag when bringing up the MARC map for your collection in Digital Collection Gateway

Applies to

- Digital Collection Gateway

Resolution

Make sure that your OAI server has the metadata format Dublin Core (oai_dc) available as a data delivery format. If making oai_dc available does not resolve the issue, contact OCLC Support with your gateway admin username, the collection bringing up the error, the type of OAI server you are running and any troubleshooting you have done.

Additional information

There is more information about Digital Collection Gateway metadata configuration.
