When you are the supplying library

Learn how to send a conditionals and reject codes as well as how to recall an item when you are the supplying library.

**Conditional**

When a request is received and you may be able to supply but only if the requesting library is willing to meet certain conditions, you can send a Conditional.

1. Login to Query Requests.
2. Retrieve the specific request
3. When the request is displayed, select **Options -> Conditional or Will Supply**, make sure the Conditional option is selected.
4. From the drop down list, select the **Condition** to send to the requesting library.
   Note: This list is not configurable.
5. If desired, enter the **date** by which the response should be received.
6. Enter any **additional notes**.

![Conditional or Will Supply](https://help.oclc.org/Resource_Sharing/Relais_ILL/ISO_transactions/10)

All of the above information is sent to the requesting library in an ILL Answer - Conditional message.

The message is sent to the requesting library automatically by the ILL Message Handler.
Conditional reply

The requesting library can respond Yes or No to the condition that you have specified.

- When the requesting library responds Yes to the ILL Answer - Conditional,
- When the requesting library responds No to the ILL Answer - Conditional, the message is picked up through the ILL Message Handler and assigns the pre-configured reject code, e.g., CRN - Conditional Reply No. As soon as the request is updated, it is cancelled and automatically removed from the Scan or Update queue. No staff intervention is required.

Reject codes

When staff assigns a Reason Unfilled (reject code) to a request, an ILL Answer message is sent by Relais.

When the ILL Message Handler generates the ILL Answer message, the reject code selected by staff is mapped to one of the standard ISO messages.

When a new reject code is added to Relais be sure to map it for use with ISO transactions.

1. Login to Table Maintenance.
2. Select the Exceptions tab.
3. Select the ISO Reject Codes tab.
4. From the Reject Type drop down, select the **code** to be mapped.
5. Then from the ISO message drop-down select an appropriate **standard ISO message**.
6. Click **Update**.
7. Repeat this for each reject code to be mapped.

**Recall**

The supplying library can issue a recall for a book that is on loan.

Use Loan Tracking to update the request to Recall

Next time **Loan Notices** is run, the Recall message is generated

Next time the ILL Message Handler is run the Recall message is sent out.
