Staff logins

Each staff member that uses Relais ILL to add, update, query and process requests can be assigned his or her own login id and password.

In addition to individual staff logins, there are several system related logins used by the automated applications and web forms/services, SYSTEM and WWW respectively. By default three additional logins are created at the time of implementation: ADMIN, STAFF and SCANNER.

### Add a staff login

When a login is needed for a new staff member:

1. Login to User Maintenance.
2. Click the **Access User** tab.
3. Enter the following information and click **Add**. (Fields marked in bold are mandatory - all other are optional).
FIELD | CHARACTERS | DESCRIPTION
--- | --- | ---
Surname | admin | Enter the staff member's surname.
First Name | admin | Enter the staff member's first name.
Language | English | Select the staff member's preferred language. Default = English
Group | Database Administrator | Select the group to which the staff member belongs.
Library Symbol | OORII | Enter the home library symbol with which the staff member is affiliated.

Caution: This is critical for shared systems since this library symbol determines which requests the staff member is able to access and update - when used with the Access all Requests setting. For example, a staff login with library symbol is only able to access patron requests that

**Limit staff functionality**

The group to which a staff member belongs determines the functions which they can access.

To remove specific functionality, e.g., Patron Registration, so that staff cannot access it.

1. Login to User Maintenance.
2. Click the **Access Functions** tab.
3. Highlight the row which corresponds to the staff member's group and the function to be removed, e.g., LEN (Lending Staff) & Patron Registration.

4. Click **Delete** and click Yes to confirm.

The next time a staff member that belongs to this group logs in and clicks Patron Registration, the following message displays:

```
You do not have access to this Function.
```

It is also possible to modify the options that display on the Relais Login, e.g., to remove functions which staff cannot access.

**Configure Add Document for Windows Login**

1. Login to Administer Settings.
2. Select the Application Settings tab.
3. Select Processing, Login, ADMINISTRATION.
4. Click on Edit Extended Settings tab.
5. Select Query Request tab.

At the Extended Query Requests Settings window make the following updates:

1. Set "Starting folder for Add Document" to the location of your stored images.
2. Set "File Storage Root for Add Document" to the location of the scanner folder in your Relais Root directory.
3. Set "Use Transfer Service" to Yes.
4. Select the Update tab.

Repeat for each instance of login you want to configure.

The value for "Starting folder for Add Document" should be the folder where you store images like pdf files. For example, you might store the files in a directory called: z:\images

Note that Relais does not automatically clear this directory after requests have been processed. But you can choose to delete them manually if you decide you no longer need them. Deleting files from this directory has no effect on the
Configure Add Document for Staff web

If you are using Add Document from Staff Web, certain lines in the relaisWeb.ini file on the ftp server must be present. The sections in the ini file to edit are FILE TRANSFER (these lines define where and how files are to be transferred) and ALLOW FILE TYPES (these lines define the kind of files which can be transferred).

Use the following example as a guide:

<table>
<thead>
<tr>
<th>LINE</th>
<th>DESCRIPTION</th>
<th>EXAMPLE</th>
</tr>
</thead>
<tbody>
<tr>
<td>FTPServerAdress</td>
<td>The IP address for the machine where files are to be uploaded.</td>
<td>FTPServerAddress=192.168.x.y</td>
</tr>
<tr>
<td>FTPUserName</td>
<td>The username for the machine where files are to be uploaded.</td>
<td>FTPUserName=admin</td>
</tr>
<tr>
<td>FTPUserPassword</td>
<td>The password for the machine where files are to be uploaded.</td>
<td>FTPUserPassword=password</td>
</tr>
<tr>
<td>FTPMode</td>
<td>Determines how the data connection is established. Can be set to either Active (A) or Passive (P).</td>
<td>FTPMode=A</td>
</tr>
<tr>
<td>TempDirectory</td>
<td>The temporary location where a file is stored before it is transferred onto the FTP server.</td>
<td>TempDirectory=/usr/tomcat/webapps/access/WEB-INF/temp/</td>
</tr>
<tr>
<td>DestinationFolder</td>
<td>The final location where a file is stored once it has been transferred onto the FTP server.</td>
<td>DestinationFolder=/images</td>
</tr>
<tr>
<td>ScannerFolder</td>
<td>The path where the file is stored.</td>
<td>ScannerFolder=R:\Relais\scanner</td>
</tr>
</tbody>
</table>

ALLOW FILE TYPES

Each line in this section contains types of files allowed in order to upload them to the ftp server or write them to a Destination Folder. In particular, these settings contain file extensions. For example,

Filetype_1=pdf
Filetype_2=tiff
Filetype_3=doc

Note: If this section is not configured then default file types are pdf, tif, jpg, bmp.
