Discover the behaviour of the OLIB pin menu. The menu is a navigation tool for accessing many of the functions used in OLIB Web. This enables access to new Searches ('menu items' or 'domains'), Folders and Saved searches, and record creation.

When you first open OLIB Web, the menu remains hidden until you open it with the right arrow. When you select the menu item you require, OLIB opens the window for that item.

To keep the menu open during your session, use the pin icon at the top of the Menu.

When first accessing the system, the **Searches** sub menu is open. This contains a list of the commonly used domains. Below it are the module headings containing the relevant groups of domains. When you open a module heading, this closes the previously displayed module.
