Learn how to rebuild configuration data after customising OLIB. After customising OLIB, the changes only take effect after running a rebuild of the configuration data from the database.

This process takes several minutes, depending on load, and will only affect users who log in to the system after the rebuild is complete.

1. Click the Options link at the top of the page.
2. Click the Rebuild tab.
3. Click the Rebuild button to set the process going.
