I want to search items received since a certain date

Last updated: Tue, 14 Jul 2020 07:07:16 GMT

Applies to

- Amlib Stockitem

Answer

1. Access Amlib > Main > **Stockitem**.
2. Enter a date into the **Received Field**.
3. Click the button to the right of this field to perform the required query:
   - < Date less than the date entered
   - = Date equal to the date entered
   - > Date more than the date entered (this is the default)
4. After entering the date and selecting the correct button, press the **F5 Query** button to view the table of results.

Additional information

- It is possible to combine other fields with the Date Received query - for example, combine a Form code to find out how many Books or DVDs received since a date. Other fields include a Stats code or Location. It is possible to use keywords as well - for example to find Science as a subject since a certain date. You could use a date in the past to find out how many Science books were received since a certain date to determine whether they are still relevant to be part of the collection
- For date ranges, it is necessary to use a Stockitem Where search
