When I run our High Use Circulation Titles Summary Report, I’m not seeing titles that I know have high use

Last updated: Thu, 22 Oct 2020 15:52:39 GMT

Symptom

• Known 'high use' titles are missing from the report.

Applies to

• WorldShare Reports

Resolution

WorldShare Analytics reports have a [50,000 row limit](https://help.oclc.org/Library_Management/WorldShare_Reports/Troubleshooting/When_I_run_our_High_Use_Circ…). The 'High Use Circulation Titles Summary Report' report selects all lines that match the search criteria (e.g. a line per day per branch per permanent shelving location) before collating them by title. Therefore the 50,000 row limit can be reached for long date periods.

1. Narrow the filters so that the limit is not reached e.g shorter time period or limit by permanent shelving location.

Additional information

It is possible to check whether the report has reached the 50,000 row limit in the Report Viewer.

1. On the [Main toolbar](https://help.oclc.org/Library_Management/WorldShare_Reports/Troubleshooting/When_I_run_our_High_Use_Circ…), select Export.
2. Select Data
3. If the number of lines is shown as 50,000, the data limit has been reached.
4. Click Cancel
