Learn how to configure a custom notification to display to your library users on WorldCat Discovery.

**Modernized WorldCat Discovery Experience**

Enable the **Migrate all users to modernized experience** setting to redirect users to the modernized WorldCat Discovery interface. This setting is disabled by default.

Note: It is recommended that you plan your institution’s full transition to the modernized interface after the availability of all planned features by June 2021.

For a preview of the modernized WorldCat Discovery interface, select the hyperlinked URL specific to your institution. The preview URL will allow controlled use of the modernized interface by specific groups of users at your institution without redirecting all traffic from your current WorldCat Discovery URL.

Note: It is recommended that you use a private or incognito window when accessing the preview URL. From the private or incognito browser window, you can close the window and return to your current WorldCat Discovery site. If you access the modernized WorldCat Discovery interface for your institution from a standard browser window, exit the preview by restarting your browser.

**Sign-in Promotion**

Determine whether to promote sign-in to library users by enabling the **Display sign-in** prompt. Signing-in allows users to request materials and access My Account.

Note: WorldCat Discovery is working on future functionality that will provide a deeper level of personalization which will require user’s to sign-in before taking advantage of these upcoming features.

**Custom Notification**

Configure a custom message to display to your library users in WorldCat Discovery and in My Account to notify them of important information.

To configure a Custom Notification:

1. Enable the **Display customized notification** setting.
2. Enter the text of your **Notification Message**.
   - 500 character limit.
   - Optional. Type `${Link!}` to display the **Notification Link Display Text** in your Notification Message.
3. Optional. **Add Translation** for the Notification Message.
1. Select the desired language from the drop-down.
2. Add Custom Text to display when the user has selected this language in the WorldCat Discovery interface.

4. Enter the Notification Link Display Text.
5. Optional. Add Translation for the Notification Link Display Text.
   1. Select the desired language from the drop-down.
   2. Add Custom Text to display when the user has selected this language in the WorldCat Discovery interface.

6. Enter the Notification Link URL.
7. Click Save.

**WorldCat Holdings Audience Levels Access**

Note: Reserved for future functionality.

WorldCat holdings audience levels will allow WMS libraries to control who can see if they have specific titles or copies of an item in their collection. By assigning a specific level to a holding, you can suppress the holding from the general public. Setting up IP address restrictions allows My Authenticated Users to access holdings without having to sign-in if they are within the recognized IP range.

- You will need to manage and assign WorldCat Holdings Audience Levels in Record Manager. WorldCat Discovery considers these settings and displays the appropriate access level to users.

**Resources Text**

Configure the label for the Resources menu in the navigation bar and footer. Retain the default label of Resources or enter a custom label appropriate for your users.

To configure a custom label:

1. Navigate to the Display Settings module of the OCLC Service Configuration and select Resources Text.
2. Enable the Use custom text setting.
3. Enter the Display Text.
   - 25 character limit.
   1. Select the desired language from the drop-down.
   2. Add Custom Text to display when the user has selected this language in the WorldCat Discovery and My Account interface.
5. Click **Save**.
