Unexpected GLIMIR message when searching in Connexion

Last updated: Fri, 04 Dec 2020 21:17:43 GMT

Symptom

- You get a message like "holding in GLIMIR cluster" or "other holdings in GLIMIR cluster" when searching in Connexion client rather than the search results you were expecting.

Applies to

- Connexion client

Resolution

Uncheck the **Display using GLIMIR clustering** checkbox on the **Cataloging > WorldCat** search window. That checkbox allows the user to see other titles in the same cluster, but is rarely used. If you uncheck it, you should see the normal bibliographic search result set instead.

Additional Information

There is more information on [GLIMIR clustering](https://help.oclc.org/Metadata_Services/Connexion/Troubleshooting/Unexpected_GLIMIR_message_when_searc...).
