Why is the number of items in the Branch Item Holdings by Shelving Location report greater than the same search in WorldShare Record Manager?

Last updated: Mon, 29 Mar 2021 18:31:31 GMT

Applies to

- WorldShare Analytics
- WorldShare Record Manager

Answer

The results in the Branch Item Holdings by Shelving Location report count each item LHR or row as an individual item. For example, if a library has five LHRs on the same OCLC number, it will be included in the report as five different rows. In WorldShare Record Manager, each OCLC number is only included once regardless of the number of LHRs.
