Why does my Collection Evaluation total for government documents not match Query collection results

Last updated: Fri, 30 Apr 2021 18:30:25 GMT

Symptom

- The number of results you receive from a Query collection for government documents turned out to be much higher than the number you see when looking at the original screen of Government documents in Collection Evaluation.

Applies to

- Collection Evaluation
- Collection Manager

Resolution

To identify Government documents, Query collections search using the material format index (i.e mt:gpb). Collection Evaluation determines the count using the call number subject division in the OCLC Conspectus. So if a title does not have "GOVDOC" in the 050 tag, it will not be picked up as a Government document in Collection Evaluation. This often causes the number in Collection Evaluation to be lower than that of Query collections searching by material format.

Additional information

There is more on the material type index and what qualifies for each type.
