Discover how to configure an HTTP order notification in WorldShare Acquisitions. You can configure the HTTP order notification feature from the Administration settings.

Note: The Acquisitions Admin role is required to configure HTTP order notification.

1. In the left navigation, click Settings > Administration.
2. Click Order Notification to open the accordion.
3. Enter the following for the server where you want HTTP place order notifications to be posted.
   - URL
   - Username
   - Password

Once the system has verified that you have entered valid values, it will post an HTTP message with a link to the order to the URL you have provided whenever an order is placed. Additionally, you can build a piece of software to listen for these messages, retrieving and synchronizing them with a campus financial system.
