Can I add non-routable or private network IP addresses to my ExcludeIP or AutologinIP directives on my Hosted EZproxy server?

Last updated: Fri, 08 Oct 2021 14:02:29 GMT

Applies to
- EZproxy

Answer
No, you cannot add nonroutable or private network IP addresses to the ExcludeIP or AutoLoginIP directives because they are internal to your network and cannot be seen by the Hosted EZproxy Server.

Additional information
Examples of nonroutable or private IP addresses are:

- 10.0.0.0 - 10.255.255.255 or **10.0.0.0/8** or (10.0.0.0 subnet mask 255.0.0.0)
- 172.16.0.0 - 172.31.255.255 or **172.16.0.0/12** or (172.16.0.0 subnet mask 255.240.0.0)
- 192.168.0.0 - 192.168.255.255 or **192.168.0.0/16** or (192.168.0.0 subnet mask 255.255.0.0)
