What is the difference between the vendors found in Usage Data and those found in Vendors?

Last updated: Thu, 11 Jul 2019 13:19:03 GMT

You can find vendor information in License Manager in **Usage Data** and in **Vendors**. However, the areas are used for different purposes.

**Usage Data**

Use the **Usage Data** area to configure vendors for automatic harvest. Please note:

- The vendors you find via the **Usage Data** screen have been vetted as compatible with License Manager
- Vendors can outsource statistical reporting to another vendor. Therefore, the vendors may or may not match vendors configured in License Manager, knowledge base collections in Collection Manager, and/or Acquisitions

**Vendors**

Use the **Vendors** area as part of your WorldShare Acquisitions workflow. Please note:

- Any library can add a new vendor
- Vendors are designed for use within Acquisitions
