Use the Harvest Summary to generate a sum total of metric types across all COUNTER reports harvested from publishing vendors in WorldShare License Manager.

**Use the Harvest Summary**

Use the Harvest Summary to generate a sum total of metric types across all COUNTER reports harvested from publishing vendors. The Harvest Summary will also indicate any missing reports from your collection of available vendors.

1. From the Harvest History tab, enter the following information:
   - Report Type
   - Report Date Range
   - Metric Type

2. Click Generate Harvest Totals to generate the Harvest Totals.

3. Click View Report Coverage to determine if you have all the reports you need or if some need to be re-harvested.

On the Report Coverage screen, if a report month is missing for a specific vendor, click on Missing or No Usage from the report to re-harvest that missing month in one of two ways:

1. For manual harvest configurations, you will be taken to the one-time harvest screen with the vendor and report type pre-selected.

2. For SUSHI harvest configurations, you'll be shown a dialog box to automatically request the missing month from the pre-configured SUSHI vendor.
