How are languages filtered in Discovery?

Applies to

- WorldCat Discovery

Answer

The 008 35-37 and 041$a,b,d fields are used for indexing language. If there are multiple languages on the record then the record will show in each of the cataloged language facets. Be aware that the indicator is necessary. So, if ind1=0: $a and other subfields are indexed, but if indicator=1: other values than $a are indexed. Additionally, 041$h is not indexed.

Example:

008 = eng
041$b=fre
041$d=gre

The record will be found when the English, French or Greek language facets are selected.

041 $h ger is NOT indexed

041 $a ara is NOT indexed because ind1 == 1
