Why am I getting the EZproxy menu page instead of my page

Last updated: Mon, 19 Sep 2022 15:19:33 GMT

Symptom
When I click the EZproxy link I am getting the EZproxy menu page

Resolution
Verify the correct URL for the target. Add the target URL to the EZproxy prefix and repost the link

Additional information
EZproxy will display the menu page when it does not know where the target URL is telling it to go. Often this is caused by an Invalid value being presented to EZproxy as a URL

Page ID
45188
