Is it possible to export the Transactions table in Connection Manager?

Last updated: Tue, 20 Sep 2022 15:12:47 GMT

Applies to

- ILLiad Client
- Connection Manager
- Customization Manager

Answer

Unlike the Log table which can be exported using the Export Log button, the Transactions table does not have built-in export functionality. However, clicking into the table and using ctrl+a will select all of the data. The data can be copied with ctrl+c and pasted into any spreadsheet software.

Additional information

Note: The above solution will work for most tables within the ILLiad Client and Customization Manager that do not have existing export or print functions.
