What to put in the category column, using Create locally preferred subjects for display and search expansion

Last updated: Wed, 21 Sep 2022 12:00:29 GMT

Symptom

• Question on what to put in the category column.

Applies to

Discovery-Display_local_data/Create_locally_preferred_subjects_for_display_and_search_expansion

Resolution

What to put in the category column?

For the “category” column in this universal re-mapping spreadsheet, the category name can be library-defined and does not need to come from any officially controlled vocabulary.

The purpose of this column is twofold:

1. To allow libraries to organize into logical categories the work they are doing to reduce harm in the subject description.
2. To allow other collaborators on this spreadsheet to quickly find work that may be relevant to their user population or any metadata work they are doing.
