Lao script is not displaying correctly on records in Connexion Client

Symptom

- Lao script is misaligned (the vowel and tone marks do not align with the consonants) when viewing records with Lao script in Connexion Client

Applies to

- Connexion Client

Resolution

This can be resolved by changing the font under Tools>Options>Fonts. Changing the font to System or Lucida Sans Unicode will display the script correctly. After saving your Fonts Options settings, you may need to close and reopen Connexion for the changes to be reflected.

This may also help issues with other language script displays. If you have tried the above and are still seeing misaligned script, please send a description of the issue along with a screenshot of a record showing the misaligned script, and a screenshot of your Fonts Options settings to OCLC Support.
