DiscoverItem

Last updated: Thu, 22 Dec 2022 15:17:52 GMT

Find information about DiscoverItem in RelaisD2D. DiscoverItem is a suite of web services

• Search to execute a federated search against a configured set of Z39.50 catalogs & targets and retrieve a set of de-duplicated bibliographic records.
• Record to retrieve a single, de-duplicated (or merged) bibliographic record, which is part of the result set of an active search.
• Search / Facet to retrieve the facets (date, medium, author and subject) associated with the records returned from an active DiscoverItem - Search

Results may be used in conjunction with other Relais web services, for example:

• Requestability to determine whether a title retrieved is requestable from one or more consortium locations or available locally;
• AddRequest to add requests to RelaisD2D

Two potential models for implementation

• user facing search and display of fulfillment options
• ‘offline’ search and creation of list of requestable locations

For complete information, refer to DiscoverItem.
